## Abstracts

Lithium orotate is a nutritional supplement form of lithium, used in micro doses much like zinc or selenium. Even the micro doses in lithium orotate may help calm brain activity, promote a positive mood, support emotional wellness and the brain's natural detoxification process, provide antioxidant support, and promote the natural balance of brain neurotransmitters. A dietary supplement is a manufactured product intended to supplement one's diet by taking a pill, capsule, tablet, powder, or liquid. A supplement can provide nutrients either extracted from food sources or that are synthetic in order to increase the quantity of their consumption. The class of nutrient compounds includes vitamins, minerals, fiber, fatty acids, and amino acids. Dietary supplements can also contain substances that have not been confirmed as being essential to life, but are marketed as having a beneficial biological effect, such as plant pigments or polyphenols. Animals can also be a source of supplement ingredients, such as collagen from chickens or fish for example. These are also sold individually and in combination, and may be combined with nutrient ingredients. The European Commission has also established harmonized rules to help insure that food supplements are safe and appropriately labeled.
