Report Overview

Lithium is a lightweight, highly reactive alkali metal widely used in batteries, ceramics, glass, lubricants, and pharmaceuticals. Its most significant application is in rechargeable lithium-ion batteries, which power electric vehicles (EVs), consumer electronics, and grid storage systems. The metal is primarily extracted from brine deposits in salt flats or hard rock minerals like spodumene and petalite. Due to its critical role in the clean energy transition and electrification of transport, lithium has become a strategically important commodity, with demand driven by rapid EV adoption and renewable energy storage needs. The market is characterized by fluctuating prices, geopolitical dependencies on key producing regions (such as Australia, Chile, and China), and evolving extraction technologies like direct lithium extraction (DLE). Sustainability concerns, including water usage in brine extraction and ethical mining practices, are increasingly shaping industry dynamics. Supply chain resilience and investments in refining capacity are key challenges as demand is projected to grow exponentially over the next decade.

The global Lithium Resources market size was estimated at USD 20022.0 million in 2024 and is projected to grow at a compound annual growth rate (CAGR) of 12.50% during the forecast period.
