## Abstracts

Lithium Tert-Butoxide( $C_4H_9LiO$ ) belongs to organometallic compound, White to grayish white powder or block. It is a useful reagent, catalyst and precursor material, which can be used in thin film deposition, industrial chemistry, pharmacy, LED manufacturing, etc. The Lead Bromide market is a specialized segment within the chemical industry, primarily involved in the production and supply of lead bromide compounds. Lead bromide, a chemical compound composed of lead and bromine, finds applications in various sectors, including the electronics and chemical industries. One of its notable applications is in photovoltaic devices, particularly in the fabrication of perovskite solar cells. Lead bromide serves as a precursor material in the manufacturing process of these high-efficiency solar cells, playing a crucial role in converting sunlight into electricity. However, it's important to note that lead bromide is subject to environmental regulations and safety considerations due to the toxicity of lead, and research efforts are ongoing to find suitable alternatives. As the demand for clean and renewable energy solutions continues to rise, the Lead Bromide market is likely to evolve in parallel with advancements in solar cell technology and the development of safer and more sustainable materials.
