The 2025 U.S. tariff policies introduce profound uncertainty into the global economic landscape. This report critically examines the implications of recent tariff adjustments and international strategic countermeasures on Lithium Thickened Lubricating Grease competitive dynamics, regional economic interdependencies, and supply chain reconfigurations. Lithium thickened lubricating grease is a multi-purpose grease based on mineral oil or synthetic oil as the base oil and made with lithium soap thickener (usually lithium 12-hydroxystearate or other lithium soap). It has excellent thermal stability, water resistance, mechanical shear stability and oxidation stability, and is the most widely used type of lubricating material in the industrial and automotive fields. This type of grease is widely used in rolling bearings, chassis joints, gear transmission parts, electric motors and agricultural machinery in medium-to-low speed and medium-temperature working environments, and can operate stably in the range of -30°C to 130°C. The lithium soap thickening structure in its composition can maintain good lubrication film integrity in high-load and water vapor environments. It is particularly suitable for applications that require rust prevention, waterproofing and extended maintenance cycles. It is a performance-upgraded alternative to traditional calcium-based and sodium-based greases.

The global Lithium Thickened Lubricating Grease market size was estimated at USD 2144.0 million in 2025 and is projected to grow at a compound annual growth rate (CAGR) of 5.20% during the forecast period.
