Report Overview

Lithography Spin Coater is a widely used for depositing materials onto substrates with accurate and controllable film thicknesses. Spin coating uses the centripetal force and surface tension of the solution to create an even film, making it quicker than other thin film coating methods. This makes it ideal for batch processing in both research and industrial settings. Spin coating is often used as the starting point and reference for many thin-film processes, even if they will eventually get mass-produced using printing-based techniques.
