Abstracts

A Live Attenuated Influenza Vaccine (LAIV), also known as the 'nasal spray' or 'intranasal' flu vaccine, is a type of influenza vaccine that is designed to provide immunity against the influenza virus. Unlike traditional injectable influenza vaccines, which contain inactivated (killed) virus particles, LAIV contains a weakened, live influenza virus. This live virus is attenuated, meaning it has been modified to reduce its virulence (ability to cause disease) while still retaining the capacity to stimulate an immune response.

The global Live Attenuated Influenza Vaccine Laiv market size was estimated at USD 8569.0 million in 2024 and is projected to grow at a compound annual growth rate (CAGR) of 6.30% during the forecast period.
