## Abstracts

Live Biotherapeutic Products (LBPs) are biotherapeutic products based on live microorganisms that are intended to treat or prevent disease by modulating the microbiome. These products are usually prepared from specific strains of microorganisms that have potential therapeutic effects, such as improving gut health, boosting the immune system, or reducing inflammation. The rising importance of the potential advantages of live biotherapeutic products and microbiome-based therapeutics in treating a variety of diseases, including inflammatory bowel disease, cancer, and neurological disorders, among patients and healthcare providers is the prime factor that propels market growth. CDMOs specializing in these fields have the expertise and infrastructure to support developing and manufacturing these complex therapies, which require specialized equipment and facilities. As a result, pharmaceutical and biotech companies can outsource their production to CDMOs, allowing them to focus on research and development.
