Abstracts

Live storage systems, also known as gravity flow racks, are dynamic storage solutions designed to enhance the efficiency of order picking operations in warehouses and distribution centers. These systems utilize inclined roller tracks or wheels, allowing items to move by gravity from the loading end to the picking face, ensuring that products are always readily accessible for order fulfillment. By reducing the need for multiple aisles and maximizing vertical storage space, these systems increase storage density within the facility, allowing for a higher number of stock-keeping units (SKUs) to be stored efficiently.

The global Live Storage for Picking System market size was estimated at USD 665.0 million in 2025 and is projected to grow at a compound annual growth rate (CAGR) of 5.00% during the forecast period.
