Abstracts

The market for liver disease diagnostics encompasses a wide range of tools and tests designed to detect, monitor, and characterize liver disorders, including viral hepatitis, non-alcoholic fatty liver disease (NAFLD), alcoholic liver disease, cirrhosis, and hepatocellular carcinoma. These diagnostics are categorized into non-invasive methods such as blood-based biomarkers (e.g., ALT, AST, bilirubin, FibroTest, ELF test), imaging techniques (ultrasound, FibroScan, MRI elastography), and algorithmic scores (APRI, FIB-4) as well as invasive procedures like liver biopsy, which remains the historical gold standard despite its limitations. The market is driven by the growing global burden of liver diseases, increasing alcohol consumption, rising prevalence of obesity and metabolic syndromes, advancements in diagnostic technologies offering higher accuracy and patient compliance, and heightened awareness and screening initiatives. Key players include diagnostic companies, laboratory service providers, and medical device manufacturers, all operating within a regulatory framework that emphasizes early detection to improve patient outcomes and reduce healthcare costs associated with late-stage liver complications.

The global Liver Disease Diagnostics market size was estimated at USD 5230.42 million in 2024 and is projected to grow at a compound annual growth rate (CAGR) of 5.80% during the forecast period.
