Livestock internal dewormers are medications or products used to eliminate or control internal parasites in livestock animals such as cattle, sheep, goats, and pigs. These dewormers are designed to be administered orally or through injection to target parasites that reside in the gastrointestinal tract or other internal organs of the animals. The dewormers containing tetrahydropyrimidines, such as pyrantel pamoate, are primarily effective against roundworms and pinworms in livestock. These dewormers, such as closantel, are effective against tapeworms and liver flukes commonly found in livestock. These are a class of anthelmintic drugs that are effective against a wide range of internal parasites, including roundworms, tapeworms, and lungworms. Common benzimidazole dewormers for livestock include fenbendazole and albendazole.
