A livestock management platform is a digital system that leverages advanced technologies such as the Internet of Things (IoT), sensor technology, cloud computing, and data analytics to monitor and manage livestock health, behavior, reproduction, and feeding in real time. By collecting key data on individual or group livestock, such as activity levels, body temperature, feed consumption, health status, and location, the platform helps farmers or managers make data-driven decisions, optimize feeding and management processes, improve production efficiency and animal welfare, and reduce disease risks and resource waste.
