Abstracts

The 2025 U.S. tariff policies introduce profound uncertainty into the global economic landscape. This report critically examines the implications of recent tariff adjustments and international strategic countermeasures on Livestock and Poultry Breeding Environmental Control System competitive dynamics, regional economic interdependencies, and supply chain reconfigurations. Livestock and poultry environmental control systems are automated systems used to regulate and optimize environmental factors such as temperature, humidity, lighting, air quality, and ventilation within a farm. These systems typically consist of sensors, controllers, actuators, and monitoring software. By monitoring environmental parameters in real time and automatically adjusting fans, heaters, wet pads, water curtains, lighting, and feeding equipment, they ensure an optimal growth environment for livestock and poultry, thereby improving production efficiency, reducing energy consumption, and reducing disease risks. Their downstream applications are primarily in large-scale livestock and poultry farms, including modern breeding operations for pigs, chickens, cattle, and sheep. The downstream market for livestock and poultry environmental control systems primarily targets large-scale livestock and poultry breeding operations, modern farms, agricultural and animal husbandry enterprises, and breeding equipment suppliers. By implementing environmental control systems, downstream users can precisely manage temperature, humidity, ventilation, lighting, and air quality within their farms, thereby improving livestock growth efficiency and health, and reducing disease risks and feeding costs. Furthermore, the systems can be integrated with intelligent feeding, disease monitoring, and production management platforms to help breeding operations optimize production plans, enhance automation and digital management, and promote the development of modern, green, and intelligent farming. The gross profit margin for livestock and poultry breeding environmental control systems is 51%. In 2024, global

production of livestock and poultry breeding environmental control systems will reach 81,171 sets, with an average selling price of US\$11,100 per set. The production capacity is 128,800 sets, with a capacity utilization rate of approximately 63%, and the gross profit margin for livestock and poultry breeding environmental control systems is 51%.

The global Livestock and Poultry Breeding Environmental Control System market size was estimated at USD 901.0 million in 2025 and is projected to grow at a compound annual growth rate (CAGR) of 12.30% during the forecast period.
