## Abstracts

LNG Cryogenic Loading Arm is mechanical structures that facilitate the transfer of liquid substances or liquefied gasses from one tank to another. They can be described as a pipe system that includes both rigid pipes and swivel joints that help articulate the system. A common configuration includes three pipes: inner arm, outer arm and drop pipe, all of them connected by swivel joints. Additionally, they can be mounted on plates attached to a wall or mounted on a column. As piping is often made of heavyweight materials such as steel, balance must be achieved to guarantee safety. This can be achieved by counterweight systems or spring balance cylinders. Currently, the market competition for LNG cryogenic loading arms is very fierce, and several international and regional companies occupy an important market share in this field, like TechnipFMC, Tokyo Boeki Holdings, SVT GmbH, Ingersoll Rand (Emco Wheaton), Woodfield Systems, Jiangsu Changlong Petrochemical Equipment and Lianyungang COSCO, etc. Competition is not only reflected in price, but also in technology, product performance and after-sales service. Although market demand is growing, the main market share is currently concentrated in the hands of some large equipment manufacturers. Small suppliers need to rely on advantages in technological innovation, quality assurance and other aspects to break through market barriers. Asia Pacific is the largest consumption region of LNG cryogenic loading arm, with a consumption market share nearly 49% in 2023. The second place is Europe; following North America with the consumption market share about 20% in 2023. New investment requires large capital, and it is difficult for small-scale enterprises to enter the industry. Similarly, there will be fluctuation in gross margin. With the continuous growth of global LNG trade, the LNG cryogenic loading arm market has also developed significantly. Despite the presence of competition problems, due to the global recovery trend is slightly, investors are still optimistic about this area; the future will still have more new investment enter the field.

The global LNG Cryogenic Loading Arm market size was estimated at USD 123.0 million in 2025 and is projected to grow at a compound annual growth rate (CAGR) of 9.70% during the forecast period.
