### Report Overview

Pump pressurization is required for liquid transportation, and pump pressurization is also required for LNG liquid transportation. However, in addition to the performance requirements of the general liquid transport pump, LNG liquid transport pump has higher requirements in terms of low temperature performance and airtight performance. LNG is pumped for production, storage and transportation. For example, LNG pumps are needed for loading cargo from the storage tank of the LNG liquefaction unit to the liquid tank of the LNG vessel, unloading when the LNG vessel arrives at the receiving station, transporting or transferring LNG outside the receiving station, loading cargo from the fixed storage tank to the transport tank truck or supplying liquid to the gasifier, etc. LNG pumps have submersible electric pumps, non-submersible cryogenic pumps, etc.
