### Report Overview:

Local anesthetics are commonly used in the department of stomatology, ophthalmology, gynecology and some minor surgeries to temporarily relieve pain. The fundamental difference between local anaesthesia and general anaesthesia lies in that after the combination of local anaesthesia with some specific parts of the sodium ion channel on the nerve membrane, the sodium ion in the sodium ion channel decreases so as to change the nerve membrane potential, causing the conduction of nerve impulse to be blocked, and finally realize the anesthetic effect. General anesthesia, on the other hand, works by affecting the physical properties of the membrane, such as the fluid and permeability of the membrane.
