Abstracts

A lock-up torque converter is a specialized type of torque converter used in automatic transmissions. It features a lock-up clutch that directly connects the engine and transmission, eliminating the slip inherent in traditional torque converters. This direct coupling of the engine to the transmission improves power transmission efficiency, especially at high speeds. By locking the converter in place, the lock-up torque converter reduces energy loss during power transfer, enhancing fuel efficiency, improving acceleration, and providing smoother driving performance.

The global Lock-up Torque Converter market size was estimated at USD 2299.0 million in 2025 and is projected to grow at a compound annual growth rate (CAGR) of 4.00% during the forecast period.
