## Abstracts

Locked Nucleic Acids (LNA) were first independently described in 1997 by Jesper Wengel<sup>1</sup> and Takeshi Imanishi<sup>2</sup> and have become an important part of hybridisation-based applications. LNAs are a class of modified RNA-nucleic acid analogues that have an additional methylene bridge. This linkage connects the oxygen atom at the C-2' of the ribose with the 4'-carbon atom and helps to fix the ribose ring in the 3'-endo conformation ("locked") which leads to the characteristic A-RNA structure and to the exclusive formation of A-duplexes.

The global Locked Nucleic Acids (LNA) market size was estimated at USD 1916.0 million in 2025 and is projected to grow at a compound annual growth rate (CAGR) of 7.90% during the forecast period.
