Logging While Drilling (LWD) is a technology that acquires geological and engineering data in real time during the drilling process. By integrating logging tools into the drill string, LWD can collect parameters such as resistivity, density, neutrons, and acoustic waves of underground rock formations during drilling, providing real-time data support for geological modeling, reservoir evaluation, and wellbore trajectory optimization. Its characteristics are improved data acquisition efficiency, reduced time and cost for separate logging, and the ability to adjust decisions in a timely manner during the drilling process to improve the safety and economy of operations.

The global Logging-While-Drilling Services market size was estimated at USD 3517.0 million in 2025 and is projected to grow at a compound annual growth rate (CAGR) of 7.60% during the forecast period.
