Automated Guided Vehicles (AGVs) in the logistics industry are self-guided, autonomous mobile robots designed to transport materials or products within warehouses, distribution centers, and manufacturing facilities without human intervention, using navigation systems such as lasers, magnets, or vision-based technologies to follow predefined paths or dynamically adapt to their environment. These vehicles enhance operational efficiency by automating repetitive tasks like moving pallets, containers, or goods between storage, assembly, and shipping areas, reducing labor costs, minimizing errors, and improving safety by limiting human exposure to heavy machinery and hazardous zones.
