Abstracts

Long Acting Beta Agonists (LABAs) are a class of bronchodilator medications primarily used in the management of respiratory conditions such as asthma and chronic obstructive pulmonary disease (COPD); they function by selectively binding to beta-2 adrenergic receptors in the airway smooth muscles, inducing prolonged relaxation and dilation of the bronchial passages to improve airflow and reduce symptoms like wheezing and shortness of breath. Typically administered via inhalation devices such as metered-dose inhalers or dry powder inhalers, LABAs are characterized by their sustained duration of action, often providing therapeutic effects for up to 12 hours or more, which distinguishes them from Short Acting Beta Agonists (SABAs) that offer rapid but short-lived relief; importantly, due to safety concerns regarding increased risks of severe asthma exacerbations, clinical guidelines recommend that LABAs should not be used as monotherapy in asthma and are instead formulated in combination with inhaled corticosteroids (ICS) to mitigate inflammation and enhance overall disease control.

The global Long Acting Beta Agonist market size was estimated at USD 12540.0 million in 2024 and is projected to grow at a compound annual growth rate (CAGR) of 4.85% during the forecast period.
