## Abstracts

The 2025 U.S. tariff policies introduce profound uncertainty into the global economic landscape. This report critically examines the implications of recent tariff adjustments and international strategic countermeasures on Long-acting Bronchodilators competitive dynamics, regional economic interdependencies, and supply chain reconfigurations. Long-acting bronchodilators are medications commonly prescribed to manage chronic obstructive pulmonary disease (COPD) and asthma, helping relieve symptoms and reduce the risk of acute exacerbations. These drugs are typically administered through dry powder or soft mist inhalers and can last between 12 to 24 hours, depending on the formulation. They are taken daily to minimize the occurrence of severe symptoms and decrease reliance on rescue inhalers. Long-acting bronchodilators mainly include long-acting muscarinic antagonists (LAMAs) and long-acting beta-agonists (LABAs), which, similar to short-acting bronchodilators, work by relaxing airway smooth muscles to improve airflow and breathing. In 2024, the global average price of long-acting bronchodilators was approximately USD 12.02 per unit, with total sales reaching around 221 million units.

The global Long-acting Bronchodilators market size was estimated at USD 2656.0 million in 2025 and is projected to grow at a compound annual growth rate (CAGR) of 4.20% during the forecast period.
