Abstracts

Long afterglow phosphors, also known as persistent luminescent phosphors, are a special type of fluorescent material that can continue to emit light for a period of time after the external excitation source (such as ultraviolet light or visible light) stops. They can maintain light for a period of time after the excitation stops, until the energy of the light disappears completely. This characteristic makes long afterglow phosphors widely used in luminous materials, emergency lighting, signs and markings, decoration and other fields.
