## Abstracts

The 2025 U.S. tariff policies introduce profound uncertainty into the global economic landscape. This report critically examines the implications of recent tariff adjustments and international strategic countermeasures on Long Carbon Chain Polyamides competitive dynamics, regional economic interdependencies, and supply chain reconfigurations. Polyamide (PA) is commonly known as nylon. Long Carbon Chain Polyamides, often referred to as long-chain nylons, are polyamides with 10 or more carbon atoms in their repeating units. These polymers are characterized by a low amide bond density, resulting in lower water absorption, better dimensional stability, and enhanced ductility compared to their shorter-chain counterparts. Examples include Nylon 610, Nylon 612, Nylon 1012, Nylon 11 and Nylon 12. Technological breakthroughs and domestic substitution are accelerating Breakthrough in high-end material technology barriers: Huitong Co., LTD. 's PA612 material has a melting point of 215?, has passed the certification of new energy vehicle manufacturers and achieved batch supply, breaking the overseas monopoly. Wanhua Chemical's 40,000-ton/year PA12 production capacity has become the first industrialized project in China, with the butadiene synthesis method quoted at 53,500 yuan per ton. Research and development of bio-based materials: The proportion of green materials such as castor oil-based PA11 and PA1012 has increased. The application scenarios continue to expand The core components of new energy vehicles: The penetration rate of PA12 in battery coolant pipelines exceeds 70%, and the application proportion of PA12 in European automotive hoses is over 50%. Energy storage and hydrogen energy systems: The demand for long-chain nylon in the inner liner of hydrogen storage bottles and liquid cooling pipelines is increasing by more than 15% annually, and its resistance to ethylene glycol hydrolysis has become a key technical factor. The lightweighting of automobiles (with a 35% weight reduction target by 2030) and the demand for wind power equipment will become the core growth drivers of the long-carbon chain nylon market.

The global Long Carbon Chain Polyamides market size was estimated at USD 2846.0 million in 2025 and is projected to grow at a compound annual growth rate (CAGR) of 3.60% during the forecast period.
