Abstracts

The 2025 U.S. tariff policies introduce profound uncertainty into the global economic landscape. This report critically examines the implications of recent tariff adjustments and international strategic countermeasures on Long Carbon Fiber Reinforced Thermoplastics competitive dynamics, regional economic interdependencies, and supply chain reconfigurations. In 2024, the global production of long carbon fiber reinforced plastics was approximately 92,000 tons, with an average selling price of about US\$30,000 per ton, a gross profit margin of about 35%, and a single production line capacity of about 5,000-10,000 tons per year. Long carbon fiber reinforced plastics refer to a class of high-performance composite materials. They use continuous carbon fibers (generally 5 mm to over 50 mm in length) as reinforcement, thermoplastic or thermosetting plastics as the matrix, and are compounded through specific processes. The upstream consists of core raw material suppliers of carbon fiber precursor and high-performance resins; the midstream is the composite material manufacturing and molding process, where companies process raw materials into granules or final components through impregnation, granulation, and subsequent injection/compression molding processes; the downstream consists of high-value end-use applications, mainly including new energy vehicles (battery boxes, body structures), aerospace (brackets, interiors), and high-end consumer electronics (thin shells, heat sinks). Demand is primarily driven by the global trends of "lightweighting" and "high performance." New energy vehicles are widely adopting technologies to reduce vehicle weight and increase range; aerospace continues to invest in weight reduction and energy conservation; and consumer electronics are pursuing a lighter, stronger, and thinner user experience.

The global Long Carbon Fiber Reinforced Thermoplastics market size was estimated at USD 2760.0 million in 2025 and is projected to grow at a compound annual growth rate (CAGR) of 11.00% during the forecast period.
