Abstracts

Glass fiber reinforced PBT has a very high rigidity, high mechanical strength, high creep strength and a very high dimensional stability. It is capable of meeting precision requirements for parts with tight tolerances. These material properties make this glass filled polyester suitable for use in parts which are exposed to high static loads over long periods in high temperature conditions. Composites include fiber-reinforced materials and organic matrices, with the most commonly used materials being Glass Fiber Reinforced Polymer (GFRP) and Carbon Fiber Reinforced Polymer (CFRP) composites, followed by composites reinforced with aramid or natural fibers. After a decline in production in 2020, the global composites industry is gradually returning to pre-pandemic growth rates, with the energy, electronics/electrical, construction, marine and consumer goods markets showing rapid recovery. New growth opportunities are also emerging in emerging sectors such as electric and hydrogen-fueled vehicles, marine, sports and recreation, medical, electrical and electronics, oil and gas, furniture and design, defense and security, and renewable energy. Between now and the future, composites will provide higher performance, lighter, more energy efficient as well as more durable products in a wider range of applications and markets.

The global Long Glass Fiber Reinforced PBT market size was estimated at USD 1071.0 million in 2025 and is projected to grow at a compound annual growth rate (CAGR) of 7.60% during the forecast period.
