Abstracts

Long Fiber Reinforced Thermoplastics (LFRT) are thermoplastics that are easy to shape. LFRT components or semi-finished products are made by compression or injection molding. The fibers are contained in a polymer matrix, usually in the form of granular raw materials. The use of long glass fiber reinforced polypropylene (PP) in injection molded parts has found new applications due to easy processing, attractive economics and a good balance of properties. The glass fibers provide mechanical strength and dimensional stability. Part properties are affected by glass fiber length, processing technology and resin formulation (including coupling chemistry, additives and colorants). Currently, the mainstream manufacturers are international leading multinational companies, such as SABIC, Celanese, Avient, Mitsubishi Chemical and Mitsui Chemicals, which have industrialized products of long glass fiber reinforced polypropylene. Domestic companies such as Kingfa, Julong Technology and Shanghai Pret also conduct research and development and sell industrialized products of LGFPP, but there is some gap with foreign countries. There are also some smaller companies that develop certain characteristic products, such as plates and molded parts, to form their own characteristics. In 2022, SABIC, Celanese, Mitsubishi Chemical, Trinseo and Avient are the top five global manufacturers, accounting for 59% of the market share. The market concentration is relatively high. In terms of consumption, Europe is currently the world's largest market, with a revenue share of about 36%, followed by North America and Asia Pacific, with market shares of about 33% and 28% respectively. From the production side, Europe is the most important production region, accounting for 38% of the market share. In terms of product types, injection molding occupies an important position. At the same time, in terms of application, the sales share of automobiles is about 69%. In the entire polymer-based fiber-reinforced composite material industry, thermoplastic composite materials occupy the vast majority of the market share. Long glass fiber reinforced polypropylene has a wide range of applications. It is a high-value-

added variety among fiber-reinforced composite materials, and it also has high technical barriers. In recent years, with the growth of demand for lightweight automobiles and miniaturization of electrical appliances, the demand for long glass fiber reinforced polypropylene has increased rapidly, and many companies have laid out in this field. With the continuous expansion of the production scale of large enterprises, the supply will increase greatly in the future.

The global Long Glass Fiber Reinforced Polypropylene market size was estimated at USD 3052.0 million in 2025 and is projected to grow at a compound annual growth rate (CAGR) of 5.50% during the forecast period.
