Report Overview

Long neutron counter is a device used to detect and measure the number of neutrons in a sample. Neutron is a subatomic particle without charge, usually produced in nuclear reaction. Long neutron counters typically consist of a long cylindrical tube filled with neutron sensitive materials such as helium-3 gas and a data acquisition system. When a neutron enters the pipeline, it interacts with the material, producing an explosion of charged particles that are detected by the data collection system. The number of detected particles is proportional to the number of neutrons in the sample.
