Abstracts

The Long Range Acoustic Device (LRAD) is a specialized non-lethal directed acoustic weapon and communication system designed to project highly focused, high-intensity sound waves over long distances, primarily for security, crowd control, and long-range hailing purposes in military, law enforcement, maritime, and public safety applications. It operates by emitting a narrow beam of sound that can transmit clear verbal warnings or deliver deterrent tones at painful decibel levels to disperse crowds or deny access to restricted areas while minimizing collateral auditory impact outside its targeted zone. The device is engineered to serve as an effective tool for de-escalation and area denial without resorting to physical force, offering a scalable solution for situations requiring both communication capabilities and non-lethal deterrence.

The global Long Range Acoustic Device market size was estimated at USD 85.5 million in 2024 and is projected to grow at a compound annual growth rate (CAGR) of 8.75% during the forecast period.
