Abstracts

Loom is machine or device which is used to produce woven fabric. It is the central point of whole process of cloth production. The loom market refers to the global market for weaving machines used in the production of textiles and fabrics. Looms are essential equipment in the textile industry, and their market is influenced by factors like technological advancements, demand for textile products, and the evolving needs of various industries. Air Jet Looms use air to propel the weft yarn through the warp threads. These are fast and efficient, making them ideal for high-speed production. Water Jet Looms use water to insert the weft yarn. These are especially effective for producing fabrics from synthetic fibers. Rapier Looms use a pair of rapiers to carry the weft yarn. These are used for a wide range of fabric types, including those requiring complex patterns. The shift towards shuttleless looms has significantly increased the speed and efficiency of textile production. These looms also enable more intricate designs and better fabric quality. The rise of automation and smart weaving technologies (such as computer-controlled looms) has improved productivity and reduced labor costs. Industries such as automotive, medical, and construction are driving the demand for specialized looms to produce high-performance textiles for technical applications. This includes airbag fabrics, tire cords, and geotextiles. There is an increasing demand for sustainable fabrics and eco-friendly production processes. Loom manufacturers are responding by developing more energy-efficient and environmentally friendly machines. The demand for fabrics with intricate patterns and designs is pushing the adoption of Jacquard looms and other advanced machinery that allows for detailed control over the weaving process. Loom manufacturers are focusing on cost-efficient production techniques to meet the demand for affordable textiles. This includes the development of looms that require less maintenance, use fewer resources, and have a longer service life.

The global Loom market size was estimated at USD 3526.0 million in 2025 and is projected to grow at a compound annual growth rate (CAGR) of 6.00% during the forecast period.
