Abstracts

Loose tube stranded optical cable is a cable structure consisting of multiple loose sleeves twisted helically around a central strength member. There is a certain movable space between the loose tube and the inner fiber, so that the fiber can move freely within a certain range, thus effectively reducing the influence of external stress on the fiber. In addition, the outer layer of the optical cable is usually wrapped with a jacket material to provide additional physical protection.

The global Loose Tube Stranded Optical Cable market size was estimated at USD 813.0 million in 2025 and is projected to grow at a compound annual growth rate (CAGR) of 5.00% during the forecast period.
