Abstracts

The 2025 U.S. tariff policies introduce profound uncertainty into the global economic landscape. This report critically examines the implications of recent tariff adjustments and international strategic countermeasures on LoRaWAN Open-Closed Sensor competitive dynamics, regional economic interdependencies, and supply chain reconfigurations. A LoRaWAN Open-Closed Sensor is a type of low-power, long-range wireless device designed to detect and report the open or closed status of doors, windows, gates, cabinets, or other movable objects. Utilizing the LoRaWAN (Long Range Wide Area Network) protocol, this sensor transmits its status data over large distances—often several kilometers—while consuming minimal energy, making it ideal for applications requiring extended battery life and remote deployment. The sensor typically consists of a magnetic reed switch or hall sensor that changes state when the magnetic field is interrupted (e.g., when a door is opened). It communicates status updates to a centralized LoRaWAN gateway, which relays the information to a network server or cloud platform for monitoring, analytics, and alerting. LoRaWAN open-closed sensors are widely used in smart buildings, industrial automation, logistics, retail, agriculture, and asset security, enabling real-time visibility and enhanced operational control across dispersed and hard-to-reach environments.

The global LoRaWAN Open-Closed Sensor market size was estimated at USD 343.0 million in 2025 and is projected to grow at a compound annual growth rate (CAGR) of 4.70% during the forecast period.
