## Abstracts

The 2025 U.S. tariff policies introduce profound uncertainty into the global economic landscape. This report critically examines the implications of recent tariff adjustments and international strategic countermeasures on Low-alcohol Liquor (Below 40?) competitive dynamics, regional economic interdependencies, and supply chain reconfigurations. Low-alcohol baijiu (Baijiu) is generally below 40%, while those above 40% are considered high-alcohol baijiu. Common low-alcohol baijiu alcohol levels include 28, 32, 35, and 38%. Due to the alcohol reduction process, the clarity of the liquor may decrease, or even become turbid. This is normal. The production of low-alcohol baijiu requires overcoming the challenge of achieving a "low-alcohol yet not bland" quality. Special processes are employed to maintain the flavor and color of the liquor while also meeting the growing demand for healthier drinks. Global sales of low-alcohol baijiu (below 40%) are projected to reach 8,000 tons in 2024, with an average selling price of US\$14,000 per ton.

The global Low-alcohol Liquor (Below 40?) market size was estimated at USD 112.0 million in 2025 and is projected to grow at a compound annual growth rate (CAGR) of 7.80% during the forecast period.
