Abstracts

The 2025 U.S. tariff policies introduce profound uncertainty into the global economic landscape. This report critically examines the implications of recent tariff adjustments and international strategic countermeasures on Low Carbon Ferrochrome Powder competitive dynamics, regional economic interdependencies, and supply chain reconfigurations. In 2024, global low carbon ferrochrome powder production reached approximately 150 K tons, with an average global market price of around US\$ 3,015/ton. Low carbon ferrochrome powder is the powdered form of low carbon ferrochromium (Fe-Cr alloy, typically C < 0.5%), supplied in specified particle sizes. The upstream raw material for low carbon ferrochrome powder is primarily chromium ore, which is used to produce ferrochrome, a key raw material for downstream stainless steel production. Global production of low carbon ferrochrome powder reaches hundreds of thousands of tons, with a gross profit margin of approximately 10%-25%. Low carbon ferrochrome (LC FeCr) is the preferred chromium-bearing alloy when steelmakers need to raise Cr while strictly limiting carbon additions (
