Abstracts

Low carbon stainless steel, also known as "L-grade" stainless steel, is a specialized variant of traditional stainless steel characterized by a reduced carbon content?typically below 0.03%?which enhances its resistance to intergranular corrosion, particularly in welded structures or environments where exposure to high temperatures could otherwise lead to carbide precipitation and material degradation. This makes it especially valuable in industries such as chemical processing, pharmaceuticals, food and beverage, and nuclear energy, where both corrosion resistance and structural integrity are critical. By minimizing susceptibility to sensitization, low carbon stainless steel extends equipment lifespan, reduces maintenance costs, and supports operational safety in aggressive or sterile conditions.

The global Low Carbon Stainless Steel market size was estimated at USD 6250.0 million in 2024 and is projected to grow at a compound annual growth rate (CAGR) of 8.50% during the forecast period.
