Abstracts

Low carbon steel bolts, defined as externally threaded fasteners manufactured from steel alloys with a carbon content typically below 0.30%, are characterized by their moderate strength, good ductility, and ease of machining, making them suitable for general-purpose applications where high tensile strength is not a primary requirement but reliable clamping force and vibration resistance are essential. These bolts are commonly used in construction, automotive assembly, machinery, and consumer goods due to their cost-effectiveness, weldability, and adequate performance in non-critical structural connections, often meeting standards such as ASTM A307 or ISO 898-1 for property class 4.6, which specifies their mechanical properties including tensile strength, yield strength, and elongation.

The global Low Carbon Steel Bolts market size was estimated at USD 15800.0 million in 2024 and is projected to grow at a compound annual growth rate (CAGR) of 4.50% during the forecast period.
