Report Overview

A low-code development platform (LCDP) is software that provides an environment programmers use to create application software through graphical user interfaces and configuration instead of traditional computer programming. The platform may focus on design and development of a particular kind of application: such as databases, business processes, or user interfaces such as web applications. Such platforms may produce entirely operational applications, or require additional coding for specific situations. Low-code development platforms reduce the amount of traditional hand coding, enabling accelerated delivery of business applications. A common benefit is that a wider range of people can contribute to the application's development—not only those with formal programming skills. LCDPs can also lower the initial cost of setup, training, and deployment.
