Abstracts

Low-code mobile app builder software provides platforms to design, build, test, and deploy native or cross-platform mobile applications for iOS and Android without requiring native coding. These platforms enable users to build apps from scratch or to convert existing web content into a native app experience, combining visual development tools, prebuilt modular functionality, and extensibility to accelerate app creation. A key feature of low-code mobile app builders is their provision of a platform-agnostic environment, meaning developers can use their existing setup to build mobile apps..These solutions are used by businesses that want to deliver production-ready mobile apps quickly without requiring traditional native development expertise. In addition to core development capabilities, many solutions offer business-focused features such as e-commerce, monetization, analytics, and push notifications, helping organizations maintain a native user experience and performance while leveraging existing resources. Unlike drag-and-drop or hobbyist builders, low-code mobile app builders are designed to support enterprise-grade requirements, including app lifecycle management from design through deployment.

The global Low-Code Mobile App Builder market size was estimated at USD 827.0 million in 2025 and is projected to grow at a compound annual growth rate (CAGR) of 7.30% during the forecast period.
