Report Overview

A low-code development platform refers to an app development platform that allows you to create business and mobile apps with little to no coding skills. They use a graphical UI with minimal logic and drag-and-drop capabilities instead of writing extensive lines of code. No-code development platforms allow you to create apps without writing a single line of code. This implies that anyone with no coding skills can build applications without any hassle. No-code platforms are related to low-code platforms closely as both of them aim to expedite app development. A no-code platform uses graphical user interfaces in addition to configurations rather than traditional programming languages.

Both low-code and no-code platforms are becoming popular as they offer an easy and fast alternative to traditional development processes. And this is why founders with no formal coding skills and professional developers are using these platforms to meet their business demands to develop an app, automate processes, and boost digital transformation.
