Abstracts

Low Cost Carriers (LCCs) are airlines that operate with a no-frills business model, focusing on minimizing operational costs to offer significantly lower ticket prices compared to traditional full-service carriers. This is achieved through strategies such as utilizing a single aircraft type to reduce maintenance and training expenses, flying to secondary or less congested airports with lower fees, maximizing aircraft utilization with quick turnarounds, charging for ancillary services like baggage and seat selection, and maintaining high-density seating configurations. The model prioritizes point-to-point routes over complex hub-and-spoke networks, enabling streamlined operations and cost efficiencies. LCCs have democratized air travel by making it accessible to a broader demographic, stimulating demand in both established and emerging markets, and reshaping competitive dynamics within the aviation industry.

The global Low Cost Carrier (Lcc) market size was estimated at USD 475200.0 million in 2024 and is projected to grow at a compound annual growth rate (CAGR) of 6.50% during the forecast period.
