Report Overview

Like basic ethylene, which is highly chemical-resistant, low-density polyethylene (LDPE) possesses similar traits. As a closed-cell foam, the structure is neither completely solid nor completely flexible, rather it assumes a semi-rigid structure. However, even in its semi-rigid form, polyethylene foam can have varying textures, appearing soft like urethane foams or harder like some polystyrene foams. There are two general types of low-density foams, distinguishable from one another by the process with which they are formed.

The global Low Density Polyethylene (Ldpe) Foams market size was estimated at USD 8045.62 million in 2024 and is projected to grow at a compound annual growth rate (CAGR) of 6.75% during the forecast period.
