Report Overview

5G has the characteristics of fast transmission speed, poor electromagnetic wave coverage, and poor transmission signal strength. Therefore, polymer materials with low dielectric, high thermal conductivity, and high electromagnetic shielding are needed. The dielectric constant requirement for low-dielectric materials is between 2.8 and 3.2, which is much smaller than the 4G standard that requires a dielectric constant between 3.4 and 3.7. Low dielectric materials are currently mainly used in antenna materials and flexible printed circuit materials. For different applications, the requirements for dielectric constant are also different.

The global Low Dielectric Polymers For 5G market size was estimated at USD 328.45 million in 2024 and is projected to grow at a compound annual growth rate (CAGR) of 8.75% during the forecast period.
