Abstracts

Low-orbit satellite Internet service is a service that uses a low-orbit satellite network to provide global Internet connectivity. By deploying a large number of low-orbit satellites in Earth orbit, these services aim to provide high-speed, reliable, global coverage Internet services, especially in remote areas and areas beyond the reach of traditional Internet infrastructure. Low-orbit satellite Internet services deploy hundreds to thousands of low-orbit satellites to divide the global coverage area into multiple satellite clusters to achieve sustained, high-density Internet coverage. Compared with traditional ground infrastructure, low-orbit satellite Internet services have global coverage capabilities, and users can receive signals whether on land, sea, or air. As services develop, the research and development of a new generation of user terminal equipment will become even more important to accommodate high-speed, low-latency Internet connections. Overall, low-orbit satellite Internet services provide a new model of Internet connectivity on a global scale and have a potentially important impact on improving global Internet accessibility and coverage.

The global Low Earth Orbit Satellite Internet Service market size was estimated at USD 5112.0 million in 2025 and is projected to grow at a compound annual growth rate (CAGR) of 15.70% during the forecast period.
