Report Overview

Low emissivity coated glass is a kind of glass whose surface is coated with low emissivity coating silver and metal-oxide film so that the glass takes on different colors. Its main functions are to reduce the U value of glass, selectively reduce S_c and comprehensively improve energy saving property of glass. Its main features: high infrared reflectivity, ability to directly reflect far infrared thermal radiation, low surface emissivity, weak ability to absorb external energy, hence little reradiated heat energy; wide range of shading coefficient SC, and ability to control sun light transmittance according to needs to cater to requirements of different areas.

APAC is the largest low emissivity coated glass market, which is projected to register the highest CAGR between 2018 and 2023. The increasing disposable income, growing wealth, and rising urbanization and population growth have led to industrial growth in the region.
