Abstracts

Low Expansion Fireproof Glass refers to a type of fireproof glass with a low coefficient of thermal expansion. In the temperature range of 25° - 300°, the thermal expansion coefficient of this kind of glass is generally between 3.1×10^{-6} and 4.0×10^{-6} , much lower than that of ordinary sodium-calcium-silica glass. This means that it will not expand or deform significantly when exposed to high temperatures, reducing the risk of cracking and breaking.

The global Low Expansion Fireproof Glass market size was estimated at USD 1360.0 million in 2025 and is projected to grow at a compound annual growth rate (CAGR) of 4.90% during the forecast period.
