Report Overview:

A low-flow toilet is defined as a toilet that uses no more than six litres of water per flush, compared to 13 litres or more required to flushing an old-fashioned loo. While low-flow toilets are not required per plumbing regulations, they are much easier to find these days compared to the older style due to an international trend towards water conservation. In this report we focus on the market of ultra low-flow toilet, which's flush rate is 1 gallon (US Gal) or under 1 gallon. The former "low-flow" toilets of the 1992s were sometimes associated with performance issues (e.g., double flushing) and poor user satisfaction. However, manufacturers have worked diligently since that time to redesign and reengineer their products to achieve both efficiency and performance.
