## Abstracts

The 2025 U.S. tariff policies introduce profound uncertainty into the global economic landscape. This report critically examines the implications of recent tariff adjustments and international strategic countermeasures on Low Loss MT Ferrule competitive dynamics, regional economic interdependencies, and supply chain reconfigurations. Low-loss MT ferrules are key components for multi-fiber connections. They utilize high-precision manufacturing processes and optimized materials to minimize insertion loss and misalignment. These ferrules are commonly used in MPO/MTP connectors. They ensure high-density fiber connections while significantly improving signal transmission efficiency and connection stability. They are widely used in data centers, high-speed communication networks, and high-performance fiber transmission systems. Low-loss MT ferrules are key components for multi-fiber connections. They utilize high-precision manufacturing processes and optimized materials to minimize insertion loss and misalignment. These ferrules are commonly used in MPO/MTP connectors. They ensure high-density fiber connections while significantly improving signal transmission efficiency and connection stability. They are widely used in data centers, high-speed communication networks, and high-performance fiber transmission systems. In 2024, global production of low-loss MT ferrules reached 41.209 million units, with an average selling price of US\$3.63 per unit. Low-loss MT ferrule production capacity is 62 million units, with a capacity utilization rate of 67% and a gross profit margin of approximately 38%. Low-loss MT ferrules, as key, high-precision components in optical communication connectivity systems, are experiencing rapid development driven by the demand for high-speed data transmission. With the accelerated construction of AI training clusters, cloud computing data centers, and 5G bearer networks, optical modules are evolving towards higher density and higher speeds, significantly increasing the requirements for optical loss control and assembly precision. This presents a strong market opportunity for low-loss MT ferrules. Compared to traditional standard MT ferrules, low-loss

products offer significant advantages in insertion loss, consistency, and reliability, making them an essential core component for high-performance MPO connectors and parallel optical modules. Currently, the industry faces high technical barriers, primarily in precision mold processing, ceramic material control, and end-face grinding processes. Leading companies such as US Conec, Chaozhou Sanhuan, and Hakusan have established scale and customer advantages. With the continued growth of global AI infrastructure investment and the evolution of data rates from 400G to 800G and even 1.6T, demand for low-loss MT ferrules will continue to rise. The industry is expected to maintain medium-to-high growth and achieve an iterative upgrade from high-end manufacturing to intelligent manufacturing in the coming years.

The global Low Loss MT Ferrule market size was estimated at USD 149.0 million in 2025 and is projected to grow at a compound annual growth rate (CAGR) of 9.50% during the forecast period.
