## Abstracts

Low Melt Polyester Fiber is a type of synthetic fiber engineered to have a lower melting point compared to conventional polyester fibers. Typically composed of a copolyester (Co-PET) or modified polyester blend, Low Melt Polyester Fiber has a melting range between 110°C and 200°C. This unique property enables it to function as a thermal adhesive, allowing fiber bonding through heat without the need for chemical adhesives or binders. Low Melt Polyester Fiber is primarily utilized in composite materials, nonwoven fabrics, and technical textiles to enhance mechanical strength, durability, and resilience. By melting at relatively low temperatures, it forms strong inter-fiber bonds, improving structural integrity while maintaining flexibility and softness. This makes it an ideal component in various applications such as automotive interiors, mattresses, insulation materials, and industrial textiles.

The global Low Melt Polyester Fiber market size was estimated at USD 2757.0 million in 2025 and is projected to grow at a compound annual growth rate (CAGR) of 8.50% during the forecast period.
