Abstracts

The 2025 U.S. tariff policies introduce profound uncertainty into the global economic landscape. This report critically examines the implications of recent tariff adjustments and international strategic countermeasures on Low Melting Point Paraffin Wax competitive dynamics, regional economic interdependencies, and supply chain reconfigurations. In 2024, global sales of low-melting-point paraffin wax reached approximately 1.65 million tons, with an average selling price of \$880 per ton. Low-melting-point paraffin wax is a byproduct of petroleum refining, typically melting between 45°C and 55°C. It is a white or slightly yellow solid with good plasticity, fluidity, and low-temperature processing properties. This product is widely used in the preparation of rubber, papermaking, matches, wood moisture-proofing, leather polishing, daily chemical products (such as candles and lubricants), and some chemical intermediates. Compared to high-melting-point paraffin wax, low-melting-point paraffin wax is suitable for applications where thermal stability is less demanding but processing temperatures are lower, effectively reducing energy consumption.

The global Low Melting Point Paraffin Wax market size was estimated at USD 1453.0 million in 2025 and is projected to grow at a compound annual growth rate (CAGR) of 4.40% during the forecast period.
