Abstracts

The market for low and no calorie soda encompasses beverages specifically formulated to contain minimal or zero caloric content, primarily through the use of artificial sweeteners like aspartame, sucralose, or stevia, or natural sugar alternatives such as erythritol and monk fruit extract; these products are designed to replicate the taste and mouthfeel of traditional sugar-sweetened sodas while appealing to health-conscious consumers seeking to reduce sugar intake, manage weight, or address medical conditions like diabetes. Growth in this segment is driven by increasing consumer awareness of the health risks associated with high sugar consumption, rising obesity rates, and supportive regulatory measures such as sugar taxes, though the market also faces challenges including negative perceptions of artificial ingredients, competition from alternative healthier beverages like sparkling water and functional drinks, and evolving consumer preferences toward more natural and clean-label products.
