The 2025 U.S. tariff policies introduce profound uncertainty into the global economic landscape. This report critically examines the implications of recent tariff adjustments and international strategic countermeasures on Low-noise High-speed Grease competitive dynamics, regional economic interdependencies, and supply chain reconfigurations. In 2024, the global production of low-noise high-speed grease reached 1,730.95 tons, with an average selling price of US\$49.73 per kilogram. Low-noise high-speed grease is a semi-solid lubricant made from synthetic hydrocarbons (such as polyalphaolefin PAO, ester oils) or high viscosity index mineral oils as base oils, thickened with low-friction coefficient thickeners such as lithium-based, polyurea-based, or complex lithium-based agents, and compounded with noise-reducing additives such as molybdenum disulfide, polytetrafluoroethylene (PTFE) nanoparticles, or organic molybdenum compounds. Low-noise high-speed grease, operating at high speeds (?5000 rpm), forms a stable oil film through the synergistic effect of a low-viscosity base oil (kinematic viscosity ?10 mm²/s at 100?) and a high-colloidal-stability thickener, reducing direct metal-to-metal contact. Simultaneously, noise-reducing additives form a low-shear-strength lubricating film on the friction surface, effectively suppressing noise generated by frictional vibration (typically ?30 dB). It also possesses excellent oxidation resistance, water resistance, and mechanical stability, making it suitable for applications requiring low-noise lubrication, such as high-speed motor bearings, precision instrument guideways, and fan shafts. The gross profit margin for low-noise high-speed grease was 19.37%, with a gross profit of US\$9.63. Single-line capacity was 70-80 tons/year. The upstream of low-noise, high-speed lubricating grease involves its raw material system (low-noise base oils such as PAO/ester oils, high-speed anti-shear thickeners such as lithium-calcium complex soaps, vibration damping and noise reduction additives, and nanoparticle dispersants), represented by companies such as ExxonMobil (low-noise base oil), Lubrizol (noise reduction additives), and BASF (nano dispersants). The

midstream involves precision formulation R&D and high-speed production (micron-level grinding technology, dynamic noise reduction testing, and automated packaging lines), encompassing companies such as Klüber Lubrication (custom high-speed grease), Fuchs (benchmark low-noise grease), Sinopec (high-speed grease production line), and SK. Lubricants (high-speed base oil integration), etc.; downstream applications are high-speed, low-noise scenarios, including high-speed motors (Wolong Electric Drive/Nidec), precision machine tools (Haas/Beijing Jingdiao), robot joints (KUKA/Siasun), power tools (Bosch/Dongcheng), and aerospace bearings (SKF/Renben Group), etc., involving end users such as Tesla (drive motors), Huawei (precision reducers), Midea (inverter air conditioners), and Mitsubishi Heavy Industries (high-speed gearboxes).

The global Low-noise High-speed Grease market size was estimated at USD 86.08 million in 2025 and is projected to grow at a compound annual growth rate (CAGR) of 5.10% during the forecast period.
